

Cartridge Heaters for **PELLET BURNERS**

Rotfil s.r.l.

Is the first manufacturer in Italy of high power density cartridge heaters.

Specifically for Pellets Stoves we supply Ultramax cartridge heaters with a special outer sheath material capable to withstand the very high temperatures involved for this application.

Our cartridge heaters can also be supplied with a special sealing system called SC400 which beside resisting the high temperatures, differently from conventional organic sealing provides a perfect protection from moisture contamination for the whole life.

This is very important in particular for cartridge heaters that are not continuously working and may accumulate moisture causing insulation problems by domestic usage.

Please do not hesitate to send us an inquiry for the cartridge heaters You use submitting drawings and quantities.
